AI / ML ENGINEER | GENERATIVE AI | LLM APPLICATIONS

Summary

Computer Engineering graduate (2026) focused on Applied AI, Generative AI, and LLM applications. Hands-on experience building RAG pipelines with LangChain and Hugging Face, integrating transformer models for inference, and developing deployable FastAPI backends with SQL databases and Docker containerization. Seeking an entry-level AI/ML or GenAI opportunity to learn from experienced engineers, contribute to real-world systems, and grow through hands-on development.

Technical Skills

AI & Generative AI: Retrieval-Augmented Generation (RAG), LangChain, Hugging Face Transformers, LLM Applications, Prompt Engineering, NLP, XLM-RoBERTa

Programming & Backend: Python, FastAPI, Flask, SQL, REST APIs, Asynchronous Programming

ML & Data Libraries: PyTorch, Pandas, NumPy, Data Cleaning, Data Transformation

Databases: PostgreSQL, MySQL, Microsoft SQL Server, Relational Database Design

Developer Tools & Cloud: Docker, Git, GitHub, Streamlit, Postman, Render, Vercel, VS Code

Projects

DocuChat – RAG Document Q&A Assistant
(Python, LangChain, Hugging Face, Streamlit) [GitHub]

- Built a Retrieval-Augmented Generation (RAG) application in Python using LangChain to query and extract answers from uploaded PDF documents.
- Implemented a document processing pipeline covering text chunking and similarity search to retrieve context-relevant information for user queries.
- Integrated Hugging Face language models and prompt templates with a Streamlit interface to generate source-grounded responses with source page references.

Codenova AI Code Reviewer
(Python, FastAPI, OpenAI API, Pydantic, Docker, Render) [Live] | [GitHub]

- Built an LLM-powered code review API using Python and FastAPI to analyze submitted source code and generate structured review feedback.
- Implemented Pydantic response schemas to validate and structure LLM-generated JSON outputs, ensuring consistent response formats.
- Containerized the application using Docker and deployed the service to Render for cloud hosting and testing.

MoodMate – Multilingual NLP Sentiment Analysis
(Python, FastAPI, XLM-RoBERTa, SQL, Supabase) [Live] | [GitHub]

- Developed the asynchronous FastAPI backend service to handle incoming sentiment analysis requests and route data across application components.
- Integrated the team's trained XLM-RoBERTa transformer model into the backend pipeline for real-time sentiment inference.
- Implemented SQL database connectivity and Supabase authentication to securely manage sentiment data, user records, and application workflows.

Experience

Web Development Intern Jun 2025
CodSoft *Remote*

- Developed modular, responsive web components and integrated client-side interfaces with backend REST services.
- Maintained disciplined Git and GitHub version control workflows across 50+ commits, adhering to structured code reviews.
- Optimized frontend assets and resolved integration issues to enhance cross-browser compatibility and UI stability.

Education

S.S.B.T.'s College of Engineering & Technology 2022 – 2026
Bachelor of Engineering in Computer Engineering | CGPA: 7.69 *Jalgaon, Maharashtra*

Certifications

TCS iON NQT–IT: Python Programming Score: 93.99% | Overall NQT Score: 74.05% | Issued Sep 2026 [Scorecard]

AWS Training & Certification: Foundations of Prompt Engineering | Sep 2026 [Certificate]

CodSoft: Web Development Intern [Certificate]

freeCodeCamp: Responsive Web Design [Certificate]

NPTEL: C Programming [Certificate]

Publication

Research Paper: "AI-Driven Mental Health Detection from Social Media Posts in a Regional Language" May 2026
Published in International Journal of Scientific Research in Computer Science & Engineering (IJSCI) [Paper] [Certificate]
